jsnover
@jsnover

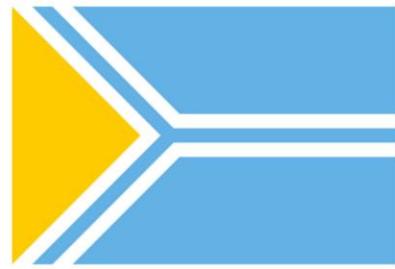

.@mattifestation Nano is probably the most important thing we've done to Windows Server since NT

4:37 PM - 30 Apr 2015

<https://twitter.com/jsnover/status/593786221404422144>

Codename Tuva

- Install.wim: 134 MB*
- Headless server
- Zero footprint: no built-in roles or features
- Purpose:
 - "Compute clusters" (Hyper-V-Host, Storage: SoFS, etc)
 - "Born-in-the-cloud"-Applications (Support for Ruby, Python, NoJS, etc)
 - Later/"next 20 years": Everything

* WS 2016, TP 4

"The **Tyva Republic** ([Russian](#)): Республика Тывá, [tr.](#) *Respublika Tyva*; IPA: [trɪ'spublɪkə t̪i'va]; [Tuvan](#): Тыва Республика, *Tyva Respublika*, [[tə'va rɪs'publɪkə](#)]), **Tyva** or **Tuva** ([Tuvan](#)): Тыва, [Russian](#): Тувá), is a [federal subject](#) of [Russia](#) (a [republic](#), also defined in the Constitution of the Russian Federation as a state [\[12\]](#)). It lies in the geographical center of [Asia](#), in southern [Siberia](#). The republic borders the [Altai Republic](#), the [Republic of Khakassia](#), [Krasnoyarsk Krai](#), [Irkutsk Oblast](#), and the [Republic of Buryatia](#) in Russia and [Mongolia](#) to the south. Its [capital](#) is the [city](#) of [Kyzyl](#). Population: 307,930 ([2010 Census](#)).[\[7\]](#)

From 1921 until 1944, Tuva constituted a sovereign, independent nation, under the name of [Tannu Tuva](#), officially, the Tuvan People's Republic, or the People's Republic of Tannu Tuva."

Size: 170,500 km²

Population: 307,930

<https://en.wikipedia.org/wiki/Tuva>

The 20 smallest countries in the world:

<http://www.worldatlas.com/articles/the-10-smallest-countries-in-the-world.html>

No1: Vatican – 0.44 km²

Population: 690

```

Workgroup vs. Domain

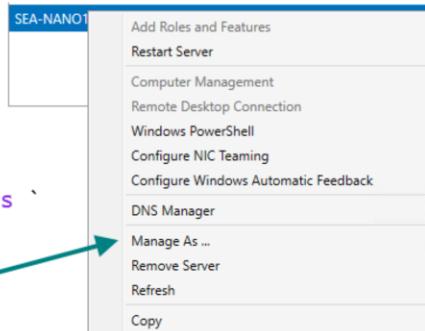

- Workgroup

- a) ConfigureTrustedHost list:

```
Set-Item `
```

```
WSMan:\localhost\Client\TrustedHosts`  
-Value 192.168.0.100 -Force
```

- b) "Manage As ..." from ServerManager

- Domain

- PreCreate AD membership:

```
djoin.exe /Provision /Domain contoso  
/Machine "sea-nano1" /SaveFile "c:\depot\sea-nano1.djoin"
```

Running apps on Nano

- Compatible API (subset)
- Reverse Forwarders:
"DLL shims" forward
api calls to new
DLLs (optional
package)
- Appx:
Windows Server
App (WSA) Installer,
no MSI support
- "Built-In" roles:
optional package

When used in any of these configuration Nano Server has the same API surface available for running applications. The Nano Server API surface is a subset of what is available in Server Core and Server with a Desktop Experience. As a subset, any application, tool, or agent that is written to run on Nano Server will run without modification on Server Core or Server with a Desktop Experience.

RSMT: Processes

The screenshot shows two windows side-by-side. The left window is titled 'Settings' with the subtitle '10.0.0.5 - PREVIEW'. It contains a sidebar with the following items:

- Properties
- Computer identification
- Local Administrators
- IP addresses
- TOOLS
 - Device Manager
 - Event Viewer
 - PowerShell
 - Processes
 - Registry Editor
 - Roles and Features
 - Services

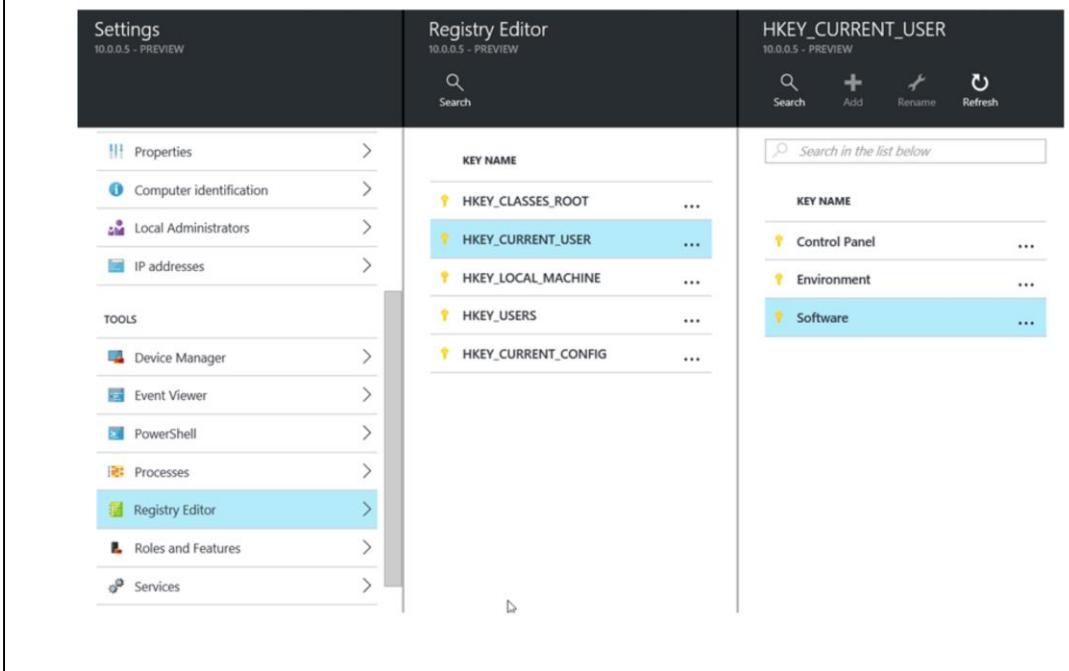

The 'Processes' item is highlighted with a blue background. The right window is titled 'Processes' with the subtitle '10.0.0.5 - PREVIEW'. It has a toolbar with 'Run process', 'Columns', and 'Refresh' buttons. A search bar is at the top. Below is a table of processes:

NAME	PID	USER NAME	CPU	WORKING S...
System Idle Pro...	0	SYSTEM	99	4 K
System interrupts	1	SYSTEM	0	0 K
System	4	SYSTEM	0	80 K
smss.exe	220	SYSTEM	0	1136 K
csrss.exe	300	SYSTEM	0	1684 K
wininit.exe	324	SYSTEM	0	3628 K
services.exe	348	SYSTEM	0	5008 K
lsass.exe	364	SYSTEM	0	11380 K
svchost.exe	488	SYSTEM	0	5556 K
svchost.exe	504	LOCAL SERVICE	0	9680 K
svchost.exe	520	NETWORK SER...	0	5884 K

A vertical bar labeled '2016' and 'PSCONF.EU' is visible on the right side of the window.

<http://blogs.technet.com/b/nanoserver/archive/2016/02/09/server-management-tools-is-now-live.aspx>

RSMT: Regedit

<http://blogs.technet.com/b/nanoserver/archive/2016/02/09/server-management-tools-is-now-live.aspx>

RSMT: DevMgmt

The screenshot shows the RSMT Device Manager interface. On the left, a sidebar lists categories like Computer, Disk drives, DVD/CD-ROM drives, IDE ATA/ATAPI controllers, Keyboards, Network adapters, Other devices, Processors, Storage controllers, Storage volumes, and System devices. A red bar at the top indicates "7 device(s) require attention". On the right, a detailed view of the "Intel(R) Xeon(R) CPU E5-2673 v3..." entry is shown. It includes a "DEVICE STATUS" section stating "This device is working properly", a "DEVICE TYPE" section listing "Processors", a "MANUFACTURER" section listing "Intel", a "DRIVER DATE" section listing "21.04.2009", a "DRIVER VERSION" section listing "10.0.10586.0", and a "DRIVER PROVIDER" section listing "Microsoft". At the bottom of the right panel, there are "Enable" and "Disable" buttons.

PROPERTY	VALUE
DEVICE STATUS	This device is working properly
DEVICE TYPE	Processors
MANUFACTURER	Intel
DRIVER DATE	21.04.2009
DRIVER VERSION	10.0.10586.0
DRIVER PROVIDER	Microsoft

GUIs on Servers Are Evil

- Low friction deployment
 - Require large amounts of code to support the GUI
- Multi-Machine Automation
 - Often call private APIs instead of public formal management APIs
 - Thwarts remote management which thwarts multi-machine management
- Modern multi-machine management GUIs
 - Require GPUs
 - Takes large amounts of resources away from the server workload
